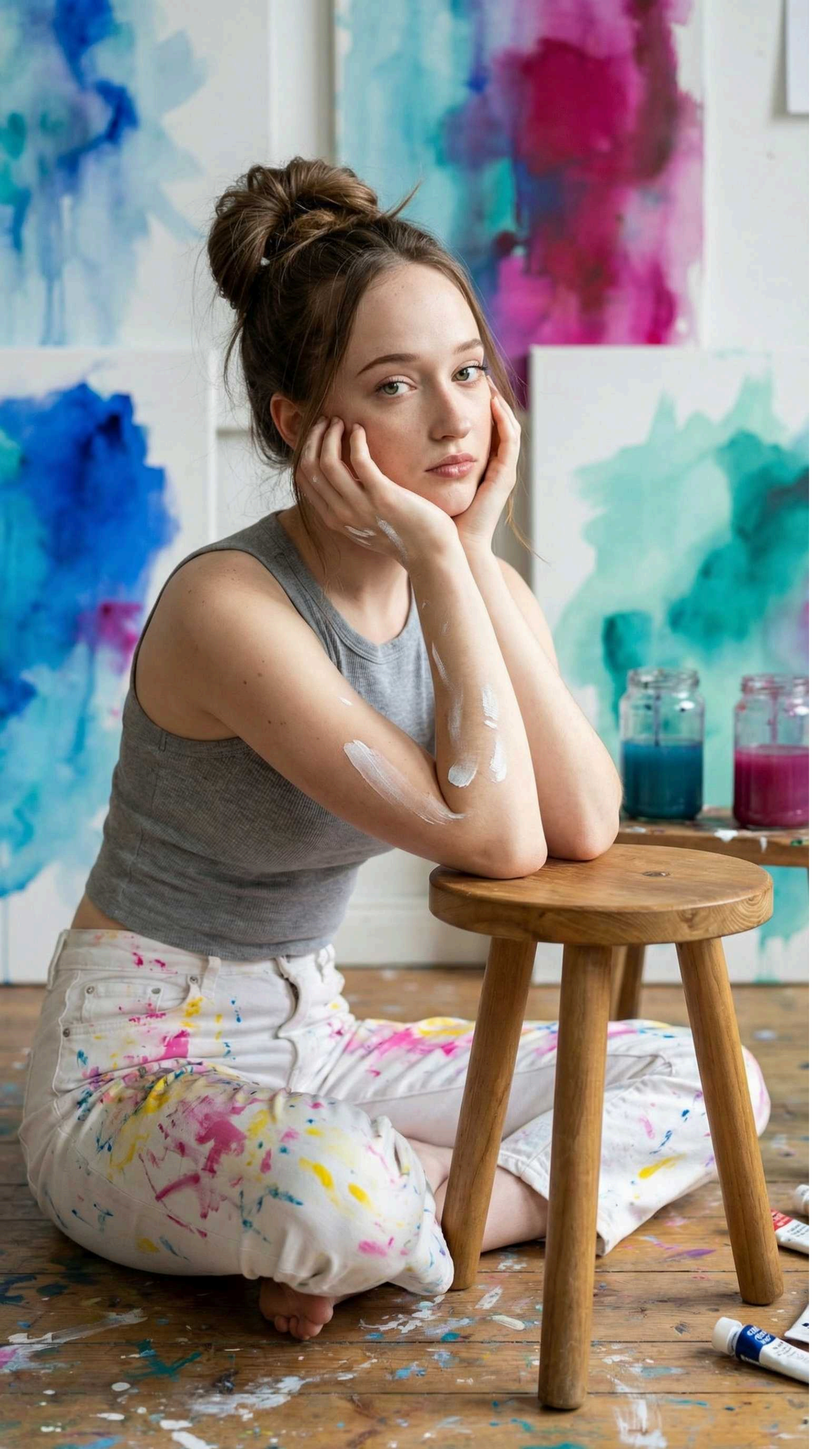
PORTFOLIO

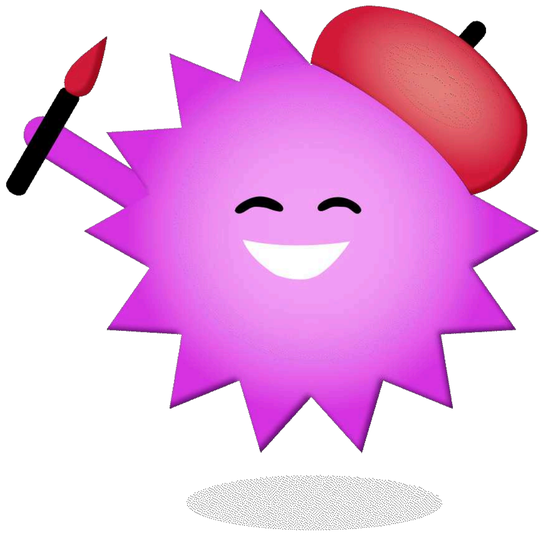
Anastasiia Pupyrina



ABOUT ME

I am a multimedia artist and designer passionate about **visual storytelling and immersive environments**. My practice combines **graphic design, motion, video, photography and 3D** to explore how **space, emotion, and narrative** can exist within digital environments.

I perceive technology as a canvas for expression. I use tools like Unity and AI to **prototype interactions** and **build atmospheric worlds**, focusing on the emotional impact.
I am particularly interested in experimental and interdisciplinary projects where technology becomes a tool for **creating atmospheric, meaningful visuals that invite reflection and engagement.**



LANG

- Japanese A2
- Ukr/Rus - Native

DISCIPLINES

- Visual Storytelling & Art Direction
- Motion Design & Video Editing
- 3D Modeling & AR/VR Environments
- Interactive Prototyping
- Concept Art & Generative Design

SOFTWARE

- Adobe Creative Cloud
- Blender, Autodesk Maya
- Nano Banana Pro, Flow, VEO
- Figma
- Unity

AMELIE

Interactive Movie

Watch Trailer

IDEA

A movie with choices and multiple endings, exploring the ***tension between ambition and the search for meaning in life***. The project focuses on dialogue between two friends, one of which - Amelie, is tired of the pressure to constantly "keep up" and compare herself to others.
The work emphasizes the ***importance of words***, tone, and ***seemingly minor decisions, showing how strongly they can affect another person's emotional state***. Through contrasting endings, the story shifts the emphasis from achievements and expectations to presence, empathy, and quiet moments together.

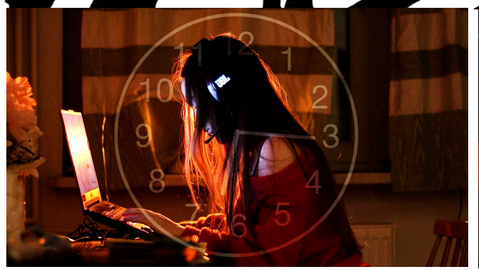
ROLE

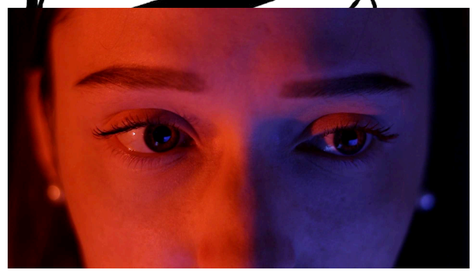
Director & Scriptwriter, Cinematographer & Lighting Designer, Narrative/Interaction Designer, VFX Artist, Sound Designer & Editor, Actor. It was a solo project during "Basics on interactive storytelling" class.

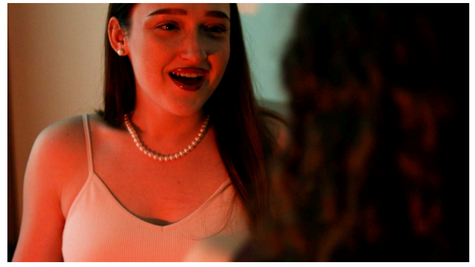
Canon eos 250d, Premiere Pro, After Effects, 2026

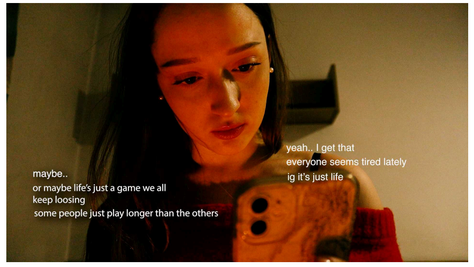
hey, Amelie
i haven't seen u in uni last days
how have you been?

REPLY YOU
ARE NOT A
BURDEN
JUST
CALL HER

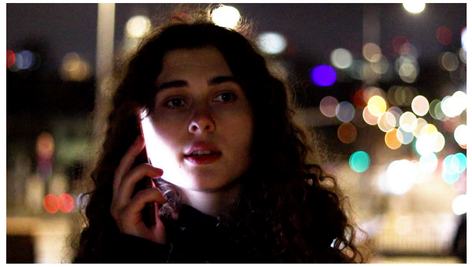


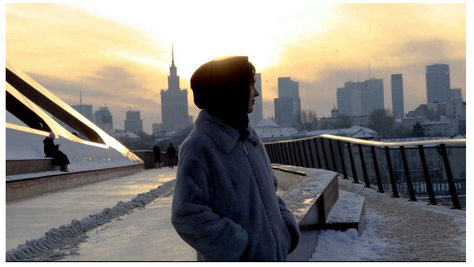




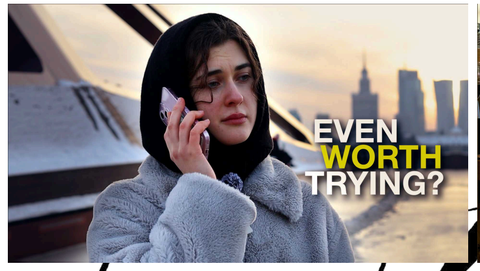


maybe..
or maybe life's just a game we all
keep loosing
some people just play longer than the others
yeah.. I get that
everyone seems tired lately
ig it's just life



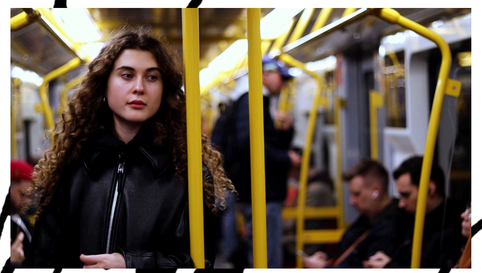


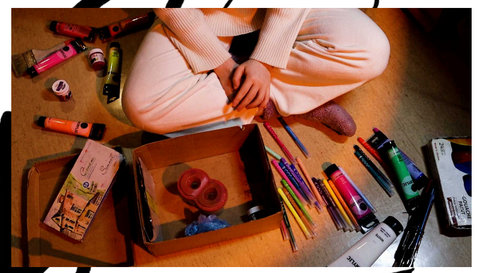
SNAPSHOTS



EVEN
WORTH
TRYING?

WAS
THIS
EXHAUSTION





STORYBOARD

"Amelie" took significant time for planning. I had to think in advance about where each branch of the story will lead, ***sketch each shot and think of their perspective, type of lightning, locations to film.***

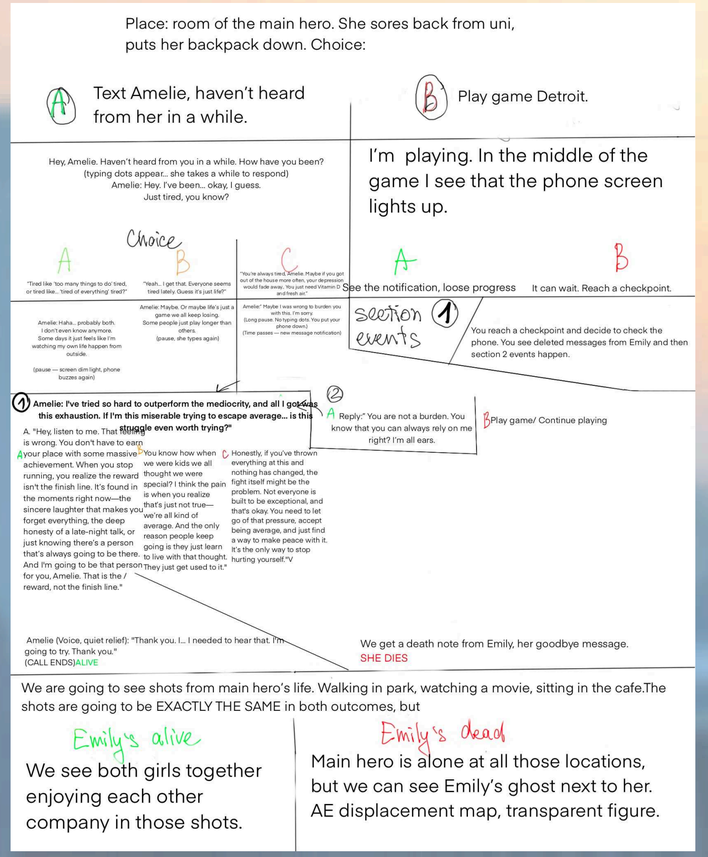
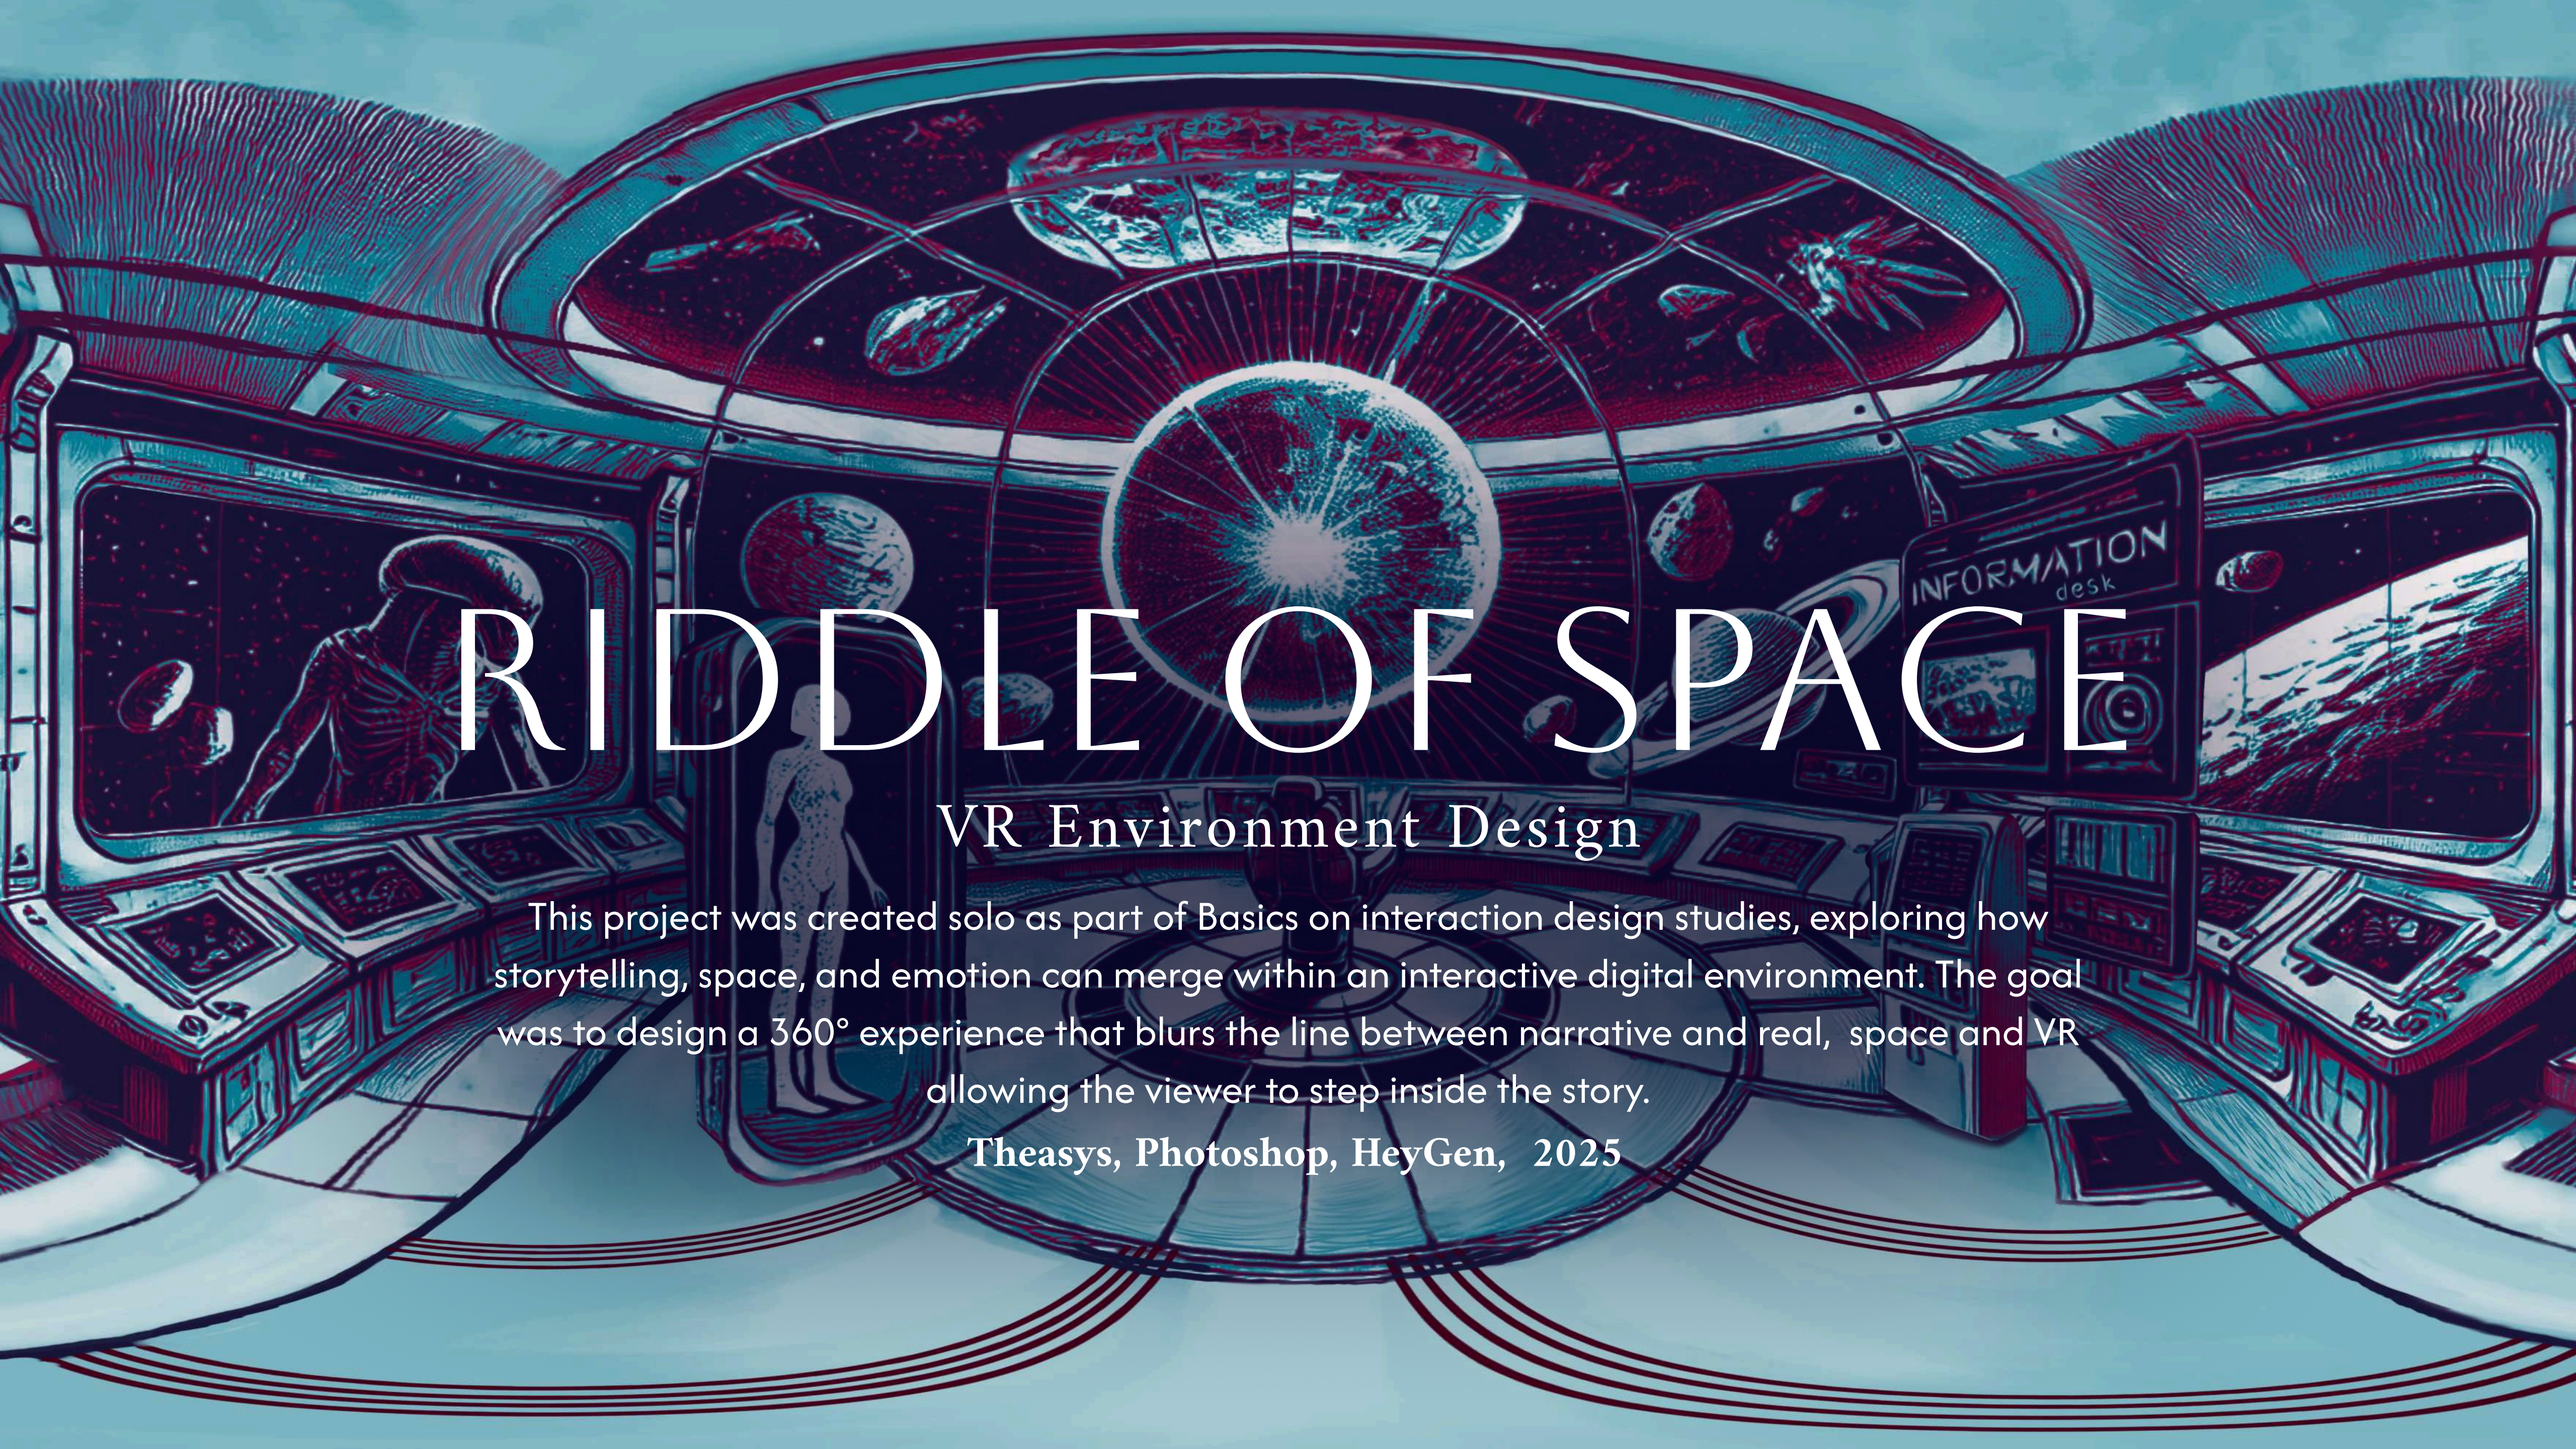
HAPPY ENDING

TRAGIC ENDING





RIDDLE OF SPACE

VR Environment Design

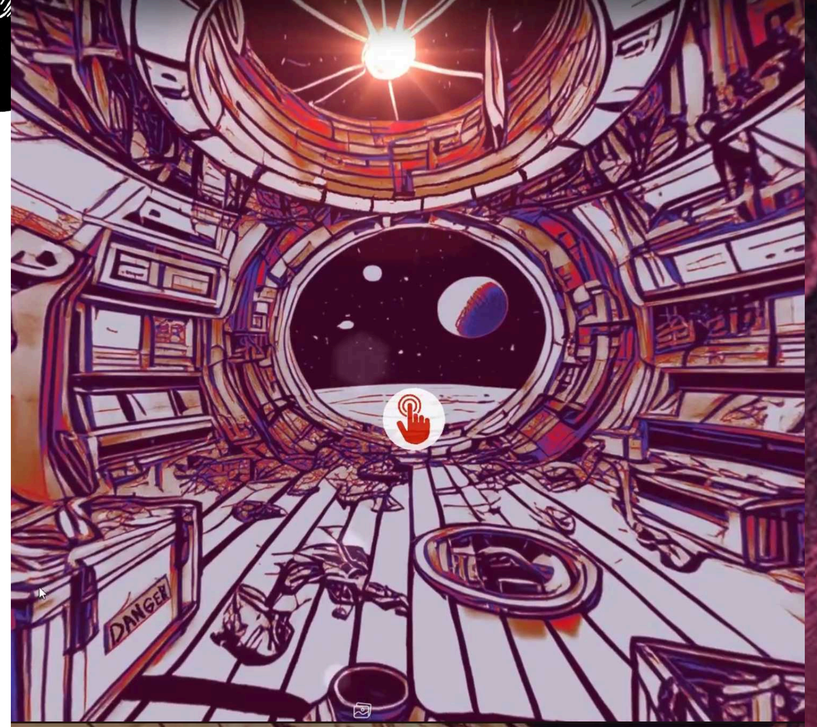
This project was created solo as part of Basics on interaction design studies, exploring how storytelling, space, and emotion can merge within an interactive digital environment. The goal was to design a 360° experience that blurs the line between narrative and real, space and VR allowing the viewer to step inside the story.

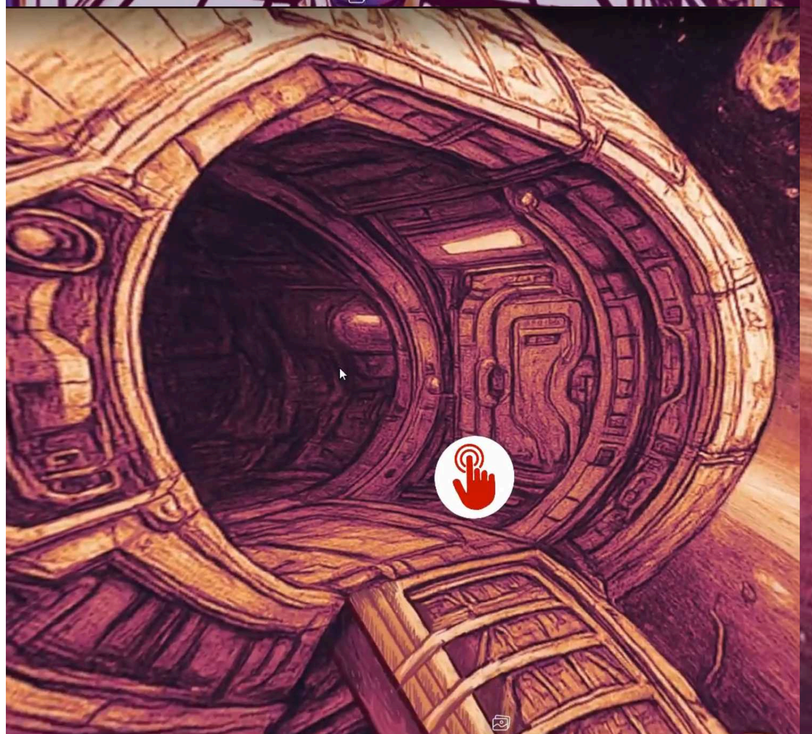
Theasys, Photoshop, HeyGen, 2025

CONCEPT

From the **headquarters**, the viewer can move through the airlock and reach **the outer bay,** where torn apart suits on the floor and the open door to space tell story of the **crew's disappearance**. The final panorama reveals the **ship from the outside**, surrounded by planets, comets, asteroids, and the **alien creature** right next to the airship.
Each scene is **fully explorable in 360°,** accompanied by **immersive dark echo music**. As users move through the airship, they solve the riddle of space at their own pace, guided by atmosphere, sound, and visual cues.

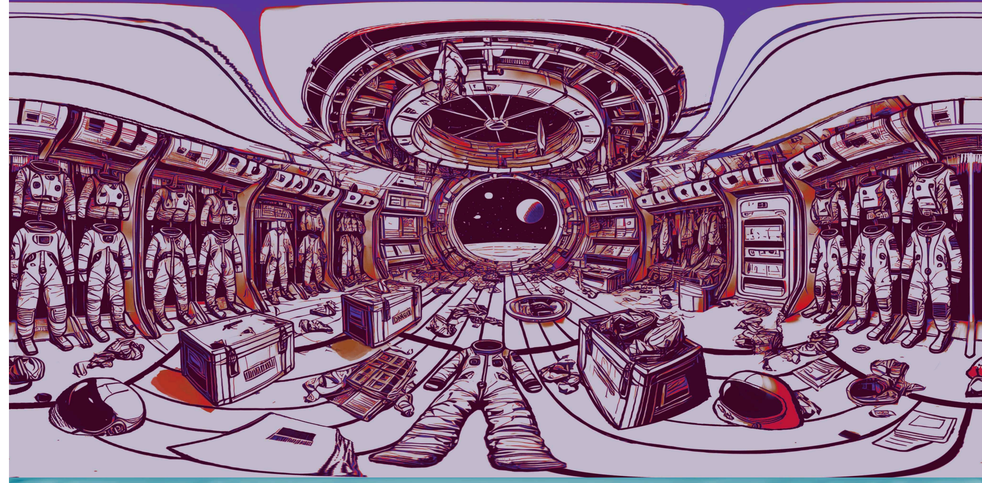
EXPERIENCE IT

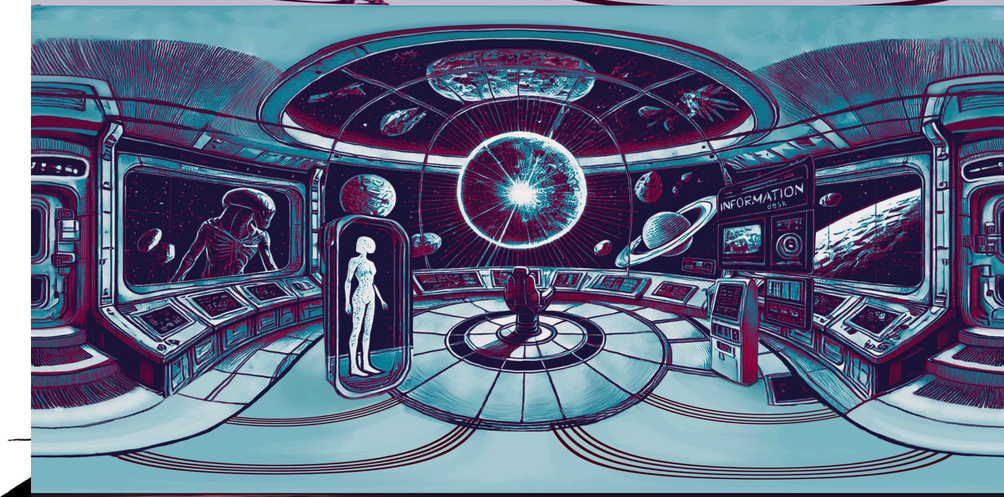




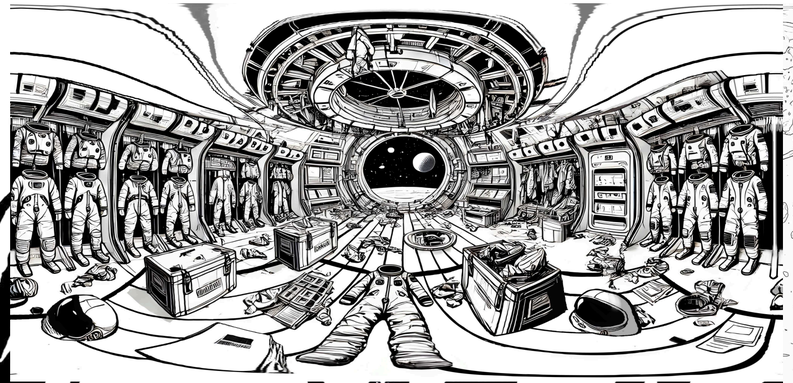
PROCESS

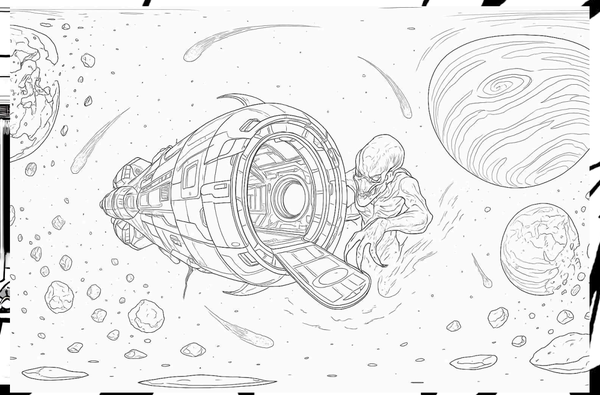
All environments were designed as **equirectangular panoramas** to simulate realistic **3D immersion**. The visuals were drawn in high detail using black-and-white ink-inspired style and then colored by color map emphasizing fear, mystery, and chaos.
The AI hologram and crew member video were **AI generated avatars** and added as **interactive hotspots**, designed to provide a player with a background of the story. The entire navigation system was structured to let viewers **move freely between scenes** - entering and exiting through doors that connect each location organically.





SKETCHES





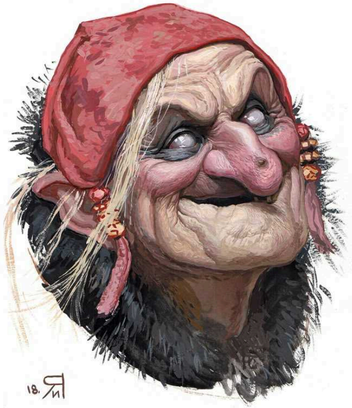
SHITONAGA UBA MEETS BABA YAGA

Illustration

Procreate, Photoshop, Lightroom, InDesign, 2025

RESEARCH

During the research phase, I focused on clearly **distinguishing the visual and cultural identities** of Baba Yaga (Slavic folklore) and Shitonaga-uba (Japanese yōkai), avoiding visual overlap despite their shared archetype of an **elderly, monstrous woman.**



Through studying myths and folklore, I identified key differences: Baba Yaga is traditionally characterized by a **long, exaggerated nose**, and an earthy, forest-bound presence rooted in Slavic pagan imagery. In contrast, Shitonaga-uba is described in some legends as having **hair formed of snakes and a long, grotesque tongue**, emphasizing her more unsettling nature.

This research-driven approach allowed the illustration to present a visual dialogue between two folkloric figures who feel related, yet unmistakably distinct.

PROCESS

1

2

Technical Workflow: The process involved creating detailed sketch followed by work in the grayscale technique to precisely define volume, spatial depth, and light-and-shadow patterns.

Compositional Logic: I developed a dynamic composition based on the 'golden spiral,' where the character's tongue serves as the key binding element, unifying the figures into a single rhythmic core."

3

Final Rendering: The final stage involved refining bounce light, detailing highlights, texturing clothing, and applying final color correction to enhance the atmosphere of mystical surrealism."

DREAM CAVE

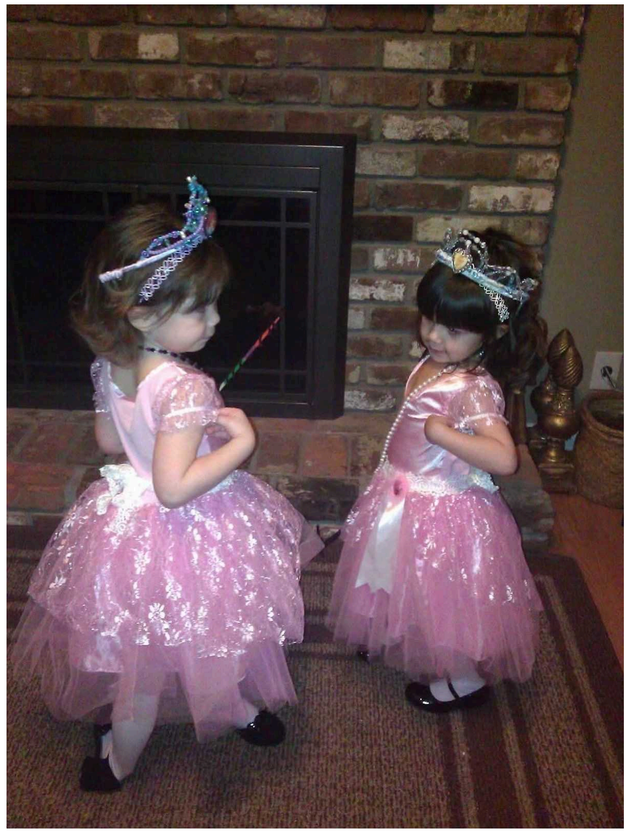
Interactive Game Scenery

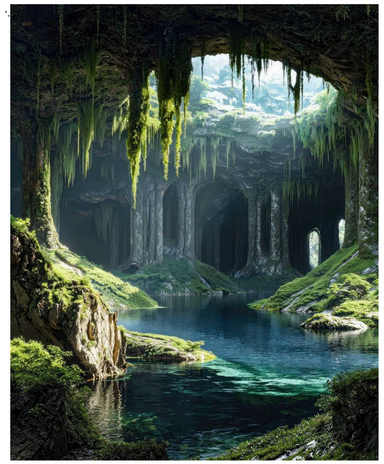
WATCH

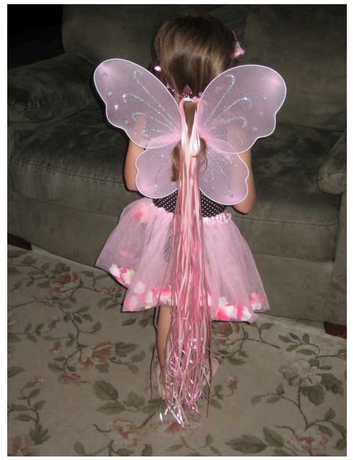
After Effects, Unity, Procreate, 2025

INSPIRATION

I was inspired by **my childhood dream - to become a fairy.** The goal was to bring to life this scenario in a short **interactive demo game scenery** capturing distinct accessories each girl had and a characteristic dress from memories. The action takes place in a **dream-like cave** with a tunnel leading to magic world. Having touched the **spelled water,** she becomes a fairy - wings are growing from her back.







TOOLS & TECHNIQUES

The project combines **multiple animation techniques** and an **interactive pipeline.** The character's body movement was created using a **2D rigging workflow in After Effects** with Duik Angela, with the character **illustrated in separated anatomical layers** (head, limbs, hands, torso).

A secondary transformation sequence – depicting wings growing from the girl's back – was animated **frame-by-frame through hand-drawn animation** in Procreate.

All animations and interactive elements, including **user-triggered actions** such as clicking on the lake to activate the wing-growth sequence, were integrated and implemented in **Unity**, where the project was fully assembled.

ECHOES OF VERSAILLES
3D Environment Design
Maya, Nano Banana Pro, 2025

CONCEPT

My vision was rooted in the **opulent aesthetic of 18th-century French interiors.** I was deeply moved by the **Rocaille style** – specifically asymmetrical curve and the organic "tendons" of ornamentation that seem to breathe life into wood and metal. The goal was to **capture that specific Baroque grandeur** as a living, breathing space. I wanted to translate the **chic elegance** of the period into digital form, focusing on the way curved filigree and ornate silhouettes catch the light, creating a sense of sophisticated movement within a static room.

WORKFLOW

I gathered a vast collection of aesthetic references from Pinterest. **Generative AI - Nana Banana Pro** was used to bridge perspective gaps in 2D imagery, **synthesizing accurate orthographic views**—front and side profiles—of specific furniture pieces. This allowed me to transform synthesized references into 3D blueprints, allowing for the reconstruction of complex Rocaille geometry and organic ornamentation with **high technical precision**.

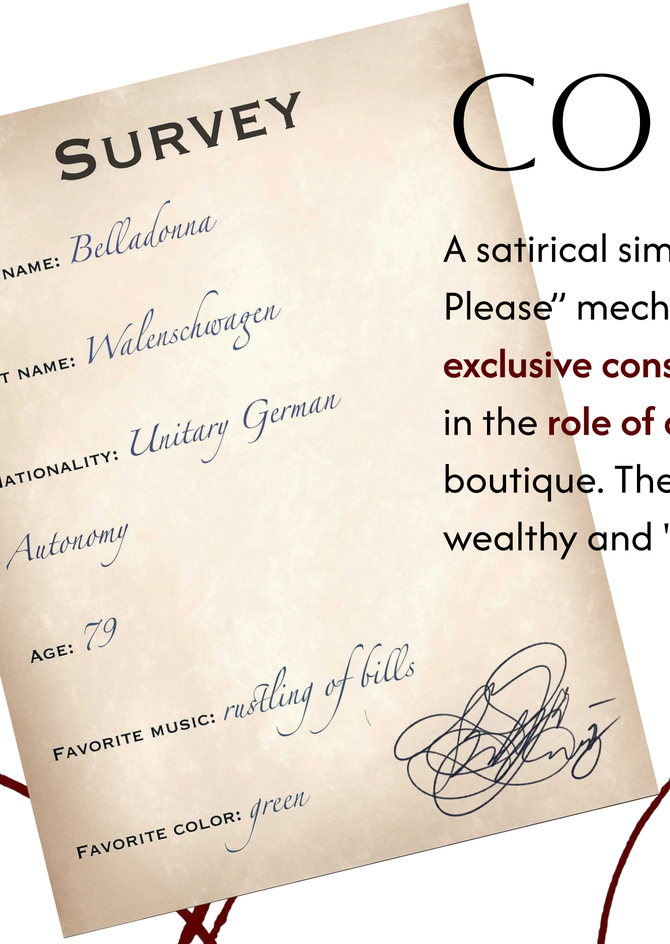
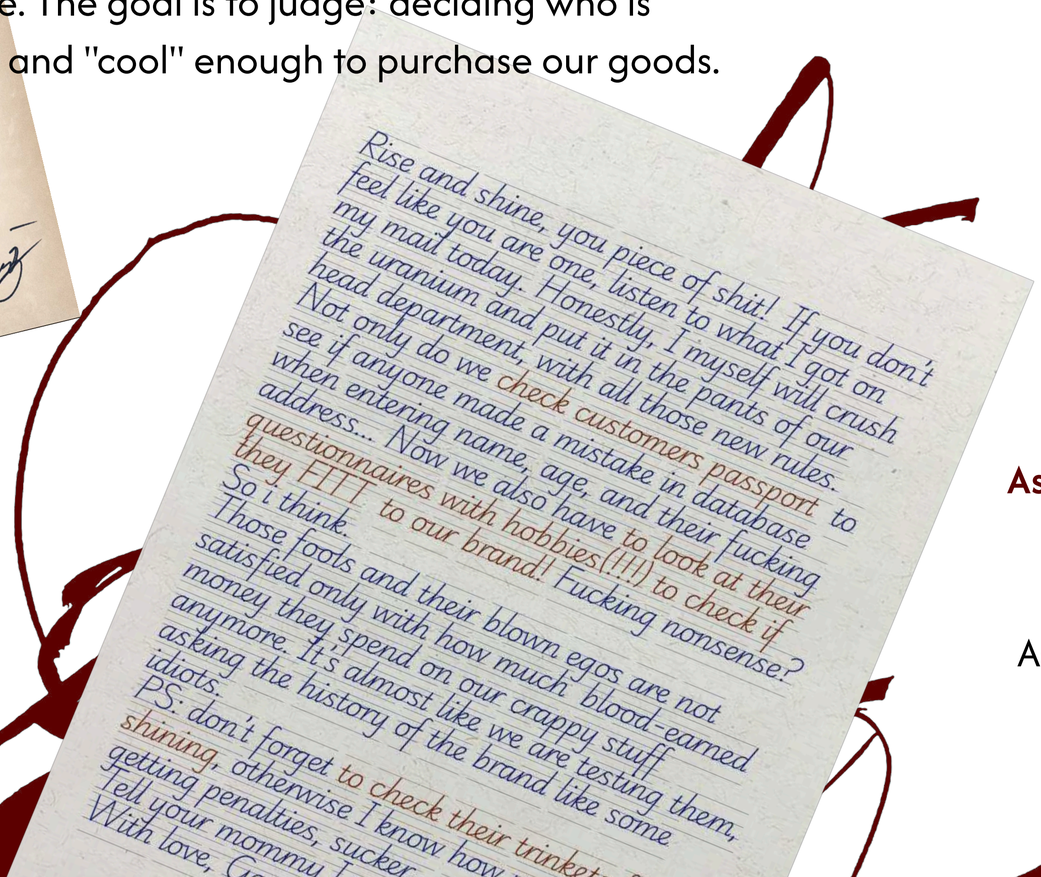
DIONYSUS
Interactive Simulation Game
A Satire on Consumerism

CONCEPT

A satirical simulation game inspired by “Papers, Please” mechanics, **exploring the absurdity of exclusive consumerism**. This game places the player in the **role of a gatekeeper** for an ultra-luxurious boutique. The goal is to judge: deciding who is wealthy and "cool" enough to purchase our goods.





CONTEXT

Team Project. I was responsible for **Technical Assembly (Unity) and UI/UX Design** of the in-game interface, **illustrated** passport and loop items. Tools: Unity (Interaction Prototyping), C# (AI-Assisted Scripting), Procreate. Developed during a 2-week intensive **game design workshop** on the topic of "Consumerism."

KEY FEATURES

Data Verification System: Implemented a logic system to cross-reference customer data (passports, surveys) against the shop's strict entry policy.

Interactive Loupe Tool: Developed a "Zoom" mechanic allowing players to inspect accessories (necklaces, jewelry) in detail to spot fakes or verify value.

Game Loop: Scripted the win/fail states (Angry Customer vs. Successful Sale) based on player decisions.

READY TO CREATE, PROTOTYPE, AND EVOLVE.

Thank you for reviewing my work.

I am eager to expand my skills in visual creation and technology within an international environment.
