PORTFOLIO

Anastasiia Pupyrina

Who I am

I am a multimedia artist and designer focused on visual storytelling, speculative concepts, and immersive digital experiences. My practice combines graphic design, motion, video, and 3D to explore how space, emotion, and narrative can exist within digital environments.
I am particularly interested in experimental and interdisciplinary projects where technology becomes a tool for expression rather than an end in itself. Through my work, I aim to create atmospheric, meaningful visuals that invite reflection and engagement.

Lang

- English C1
- French B2
- Polish B1
- Japanese N4
- Ukrainian / Russian - Native

Disciplines

- Concept Art & Worldbuilding
- Motion Design & Video Art
- 3D Modeling & Digital Environments
- Graphic Design & Illustration
- Photography & Visual Studies

Software

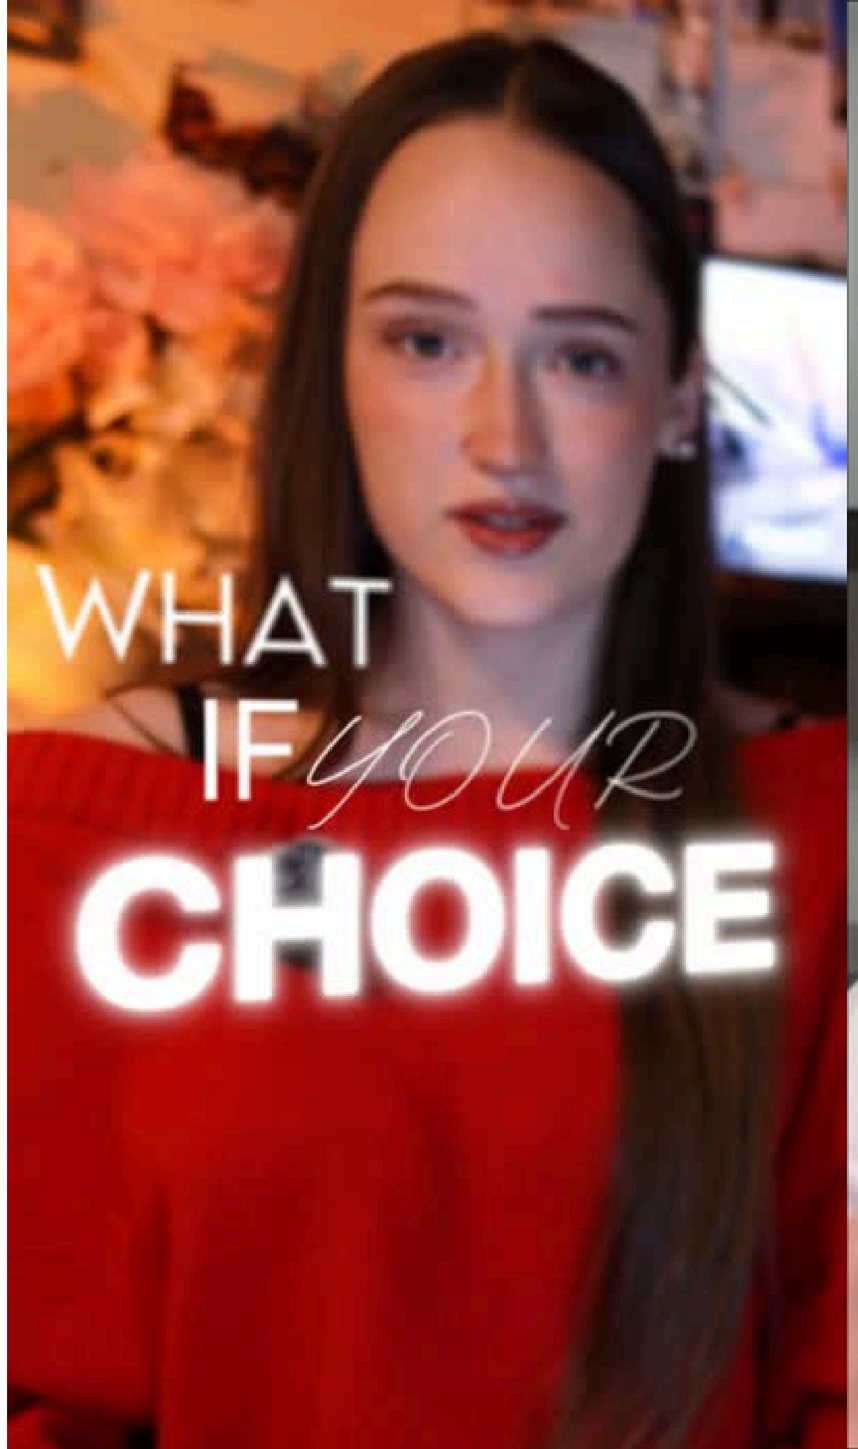
- Adobe Photoshop, Illustrator, Animate, After Effects, Lightroom, Premier Pro
- Blender
- Autodesk Maya

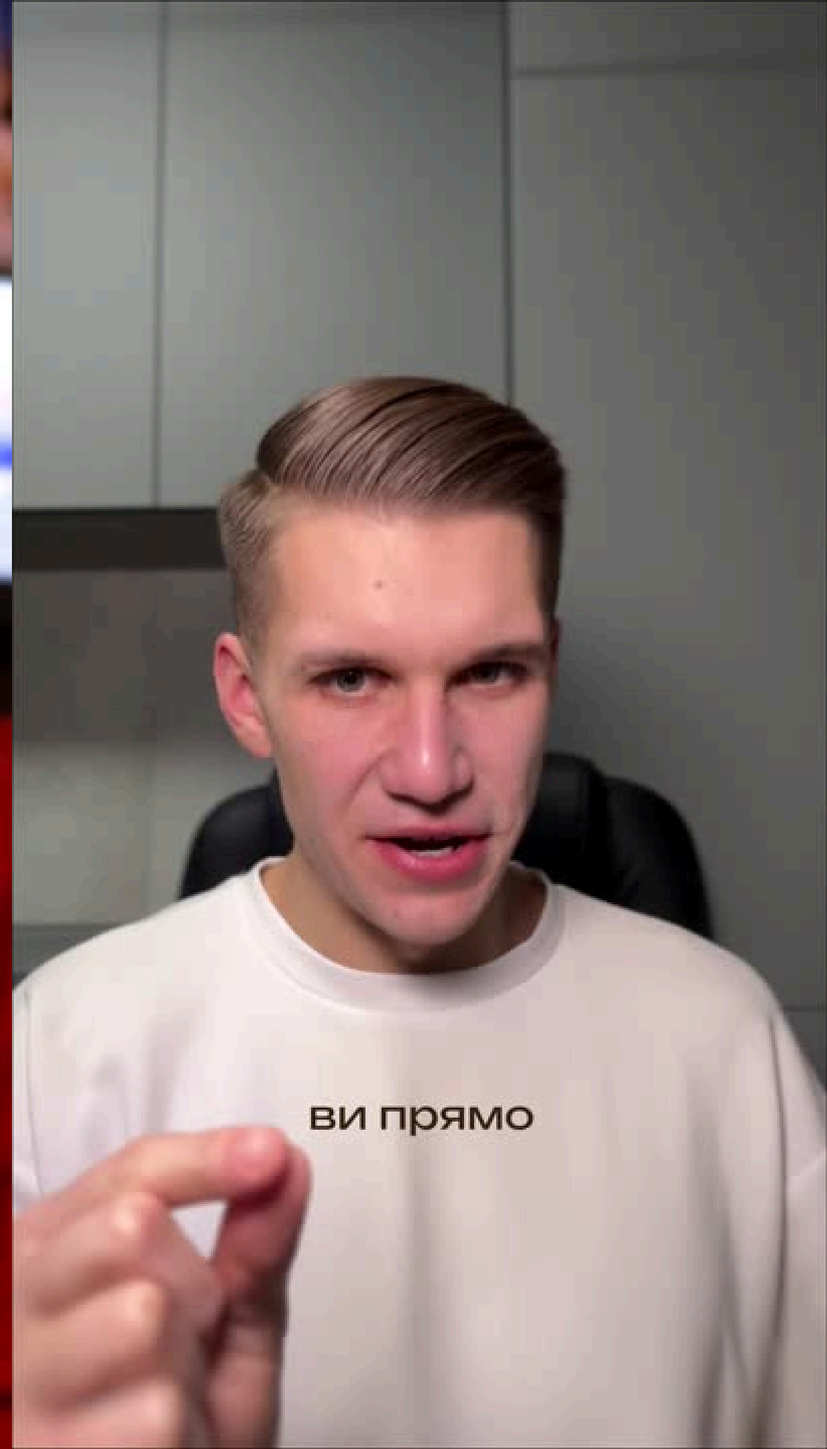
VIDEO EDITING

for Expert blogs or brands

A COMPLEX APPROACH WHICH INCLUDES:

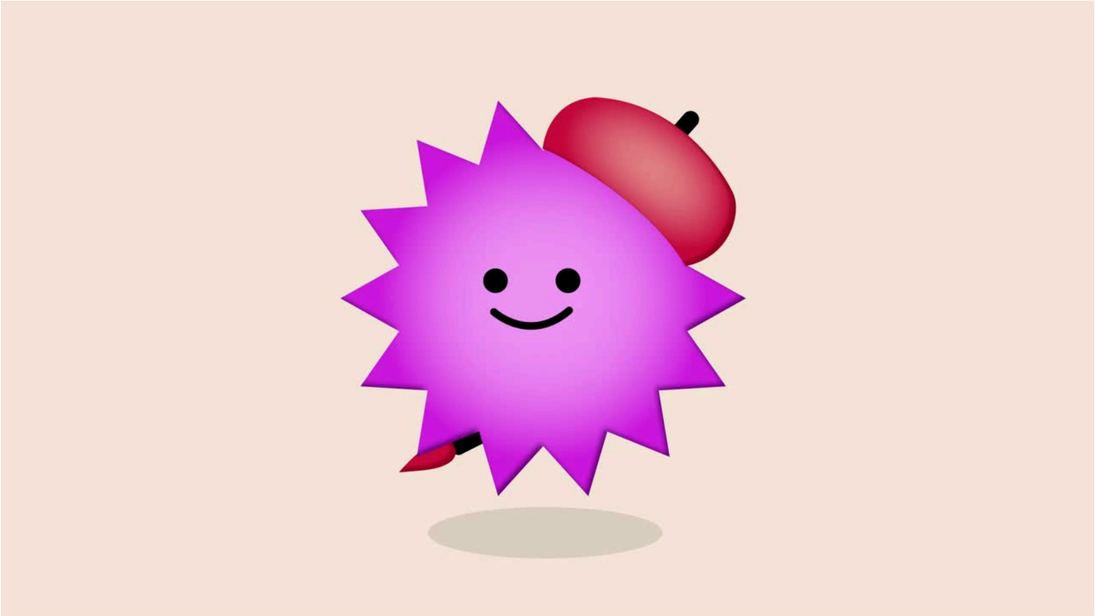
- dynamic cutting
- animation of still head shots
- 3d space compositions
- animated subtitles
- subtitles as part of the visuals
- cinematic color & light correction
- deliberate work with sound, SFX

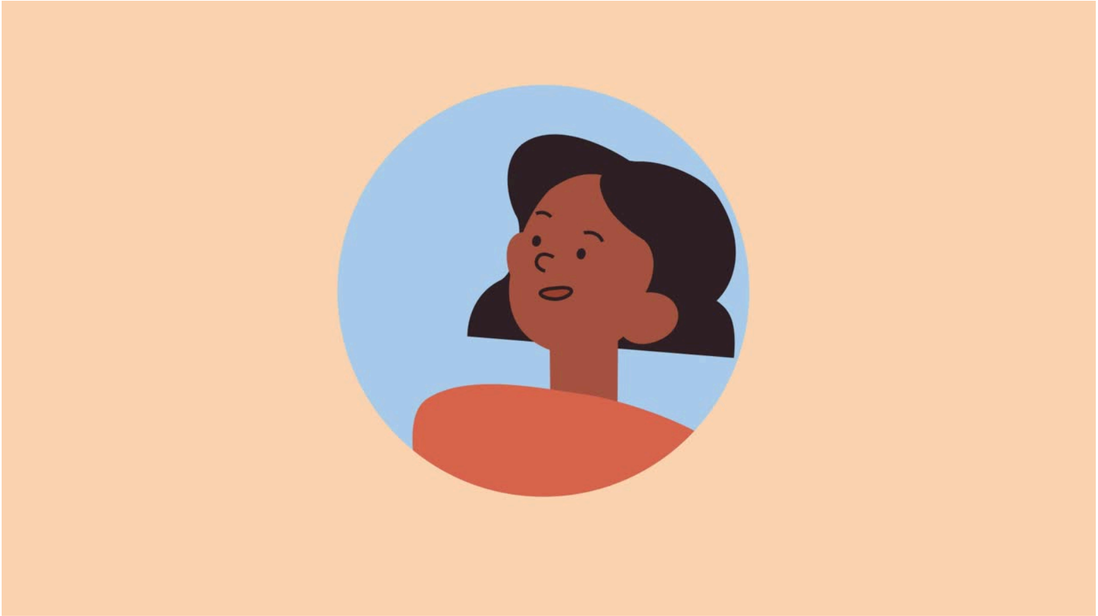




VECTOR ANIMATION

Animated Avatars, graphics etc.



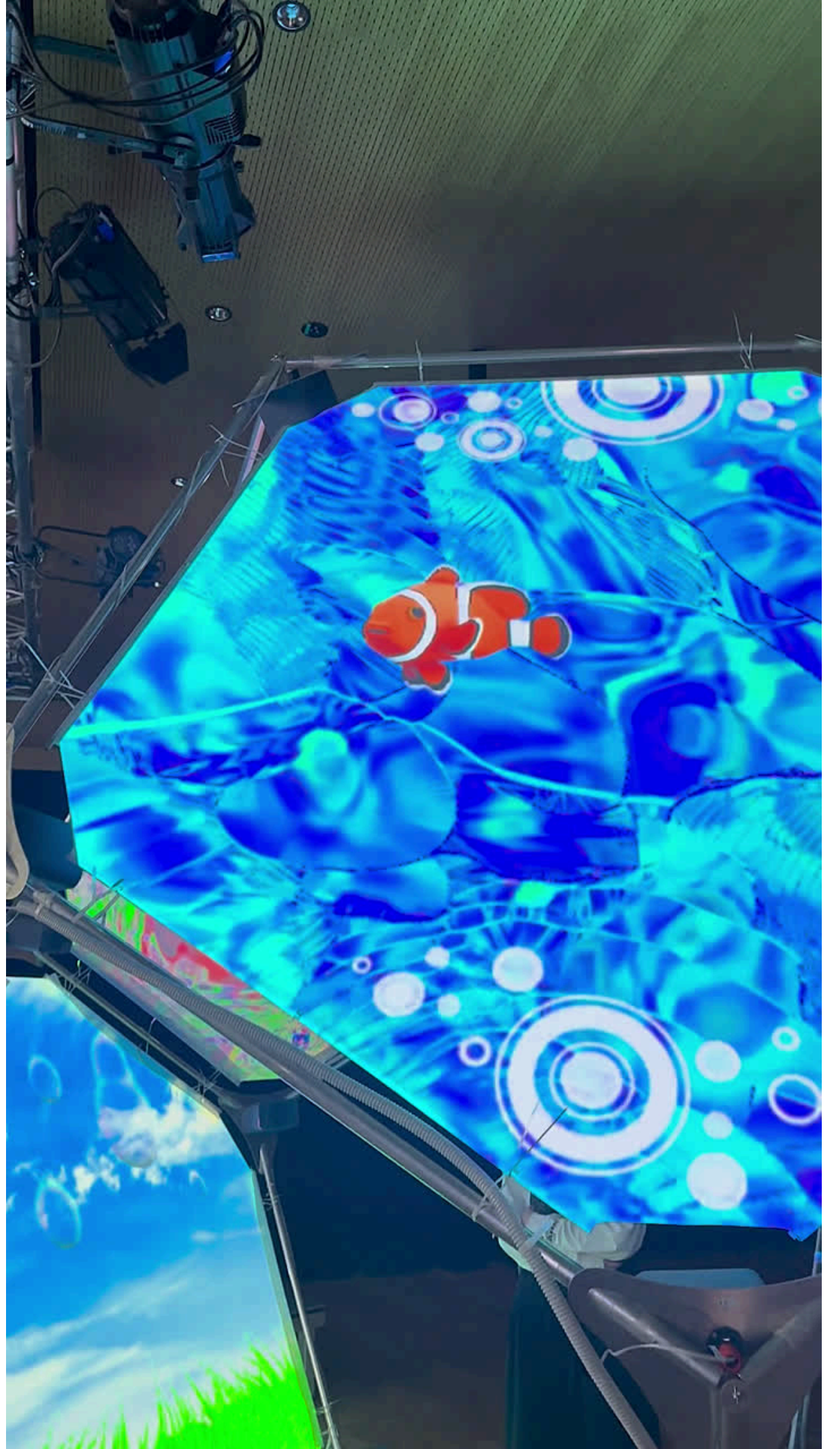


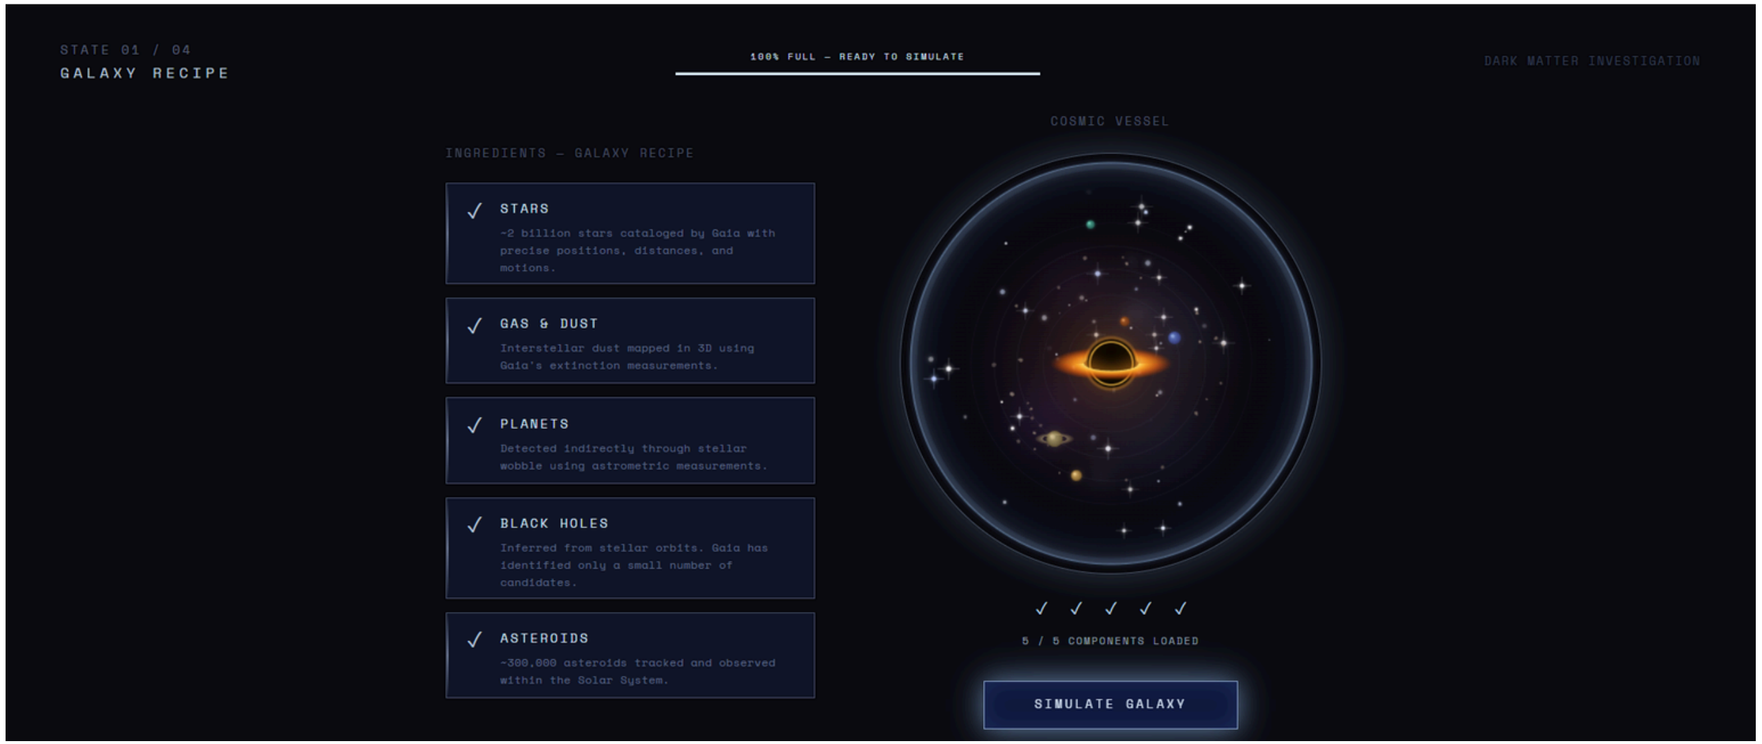
The Future We Were Promised

DodekaOTTO Narrative Engine: Space, Sound, Image

We explored **Frutiger Aero style** - the way we used to imagine future back in 2000s. It was a **synergy of technology with nature**, pure water, green grass, often associated with popular Windows desktop wallpaper.

My responsibilities: **3d modeling** of a fish, **texturing** in Substance Painter, **Rigging** and **Animation** in Maya. I also did a “watery” background on the top left screen in Touchdesigner.

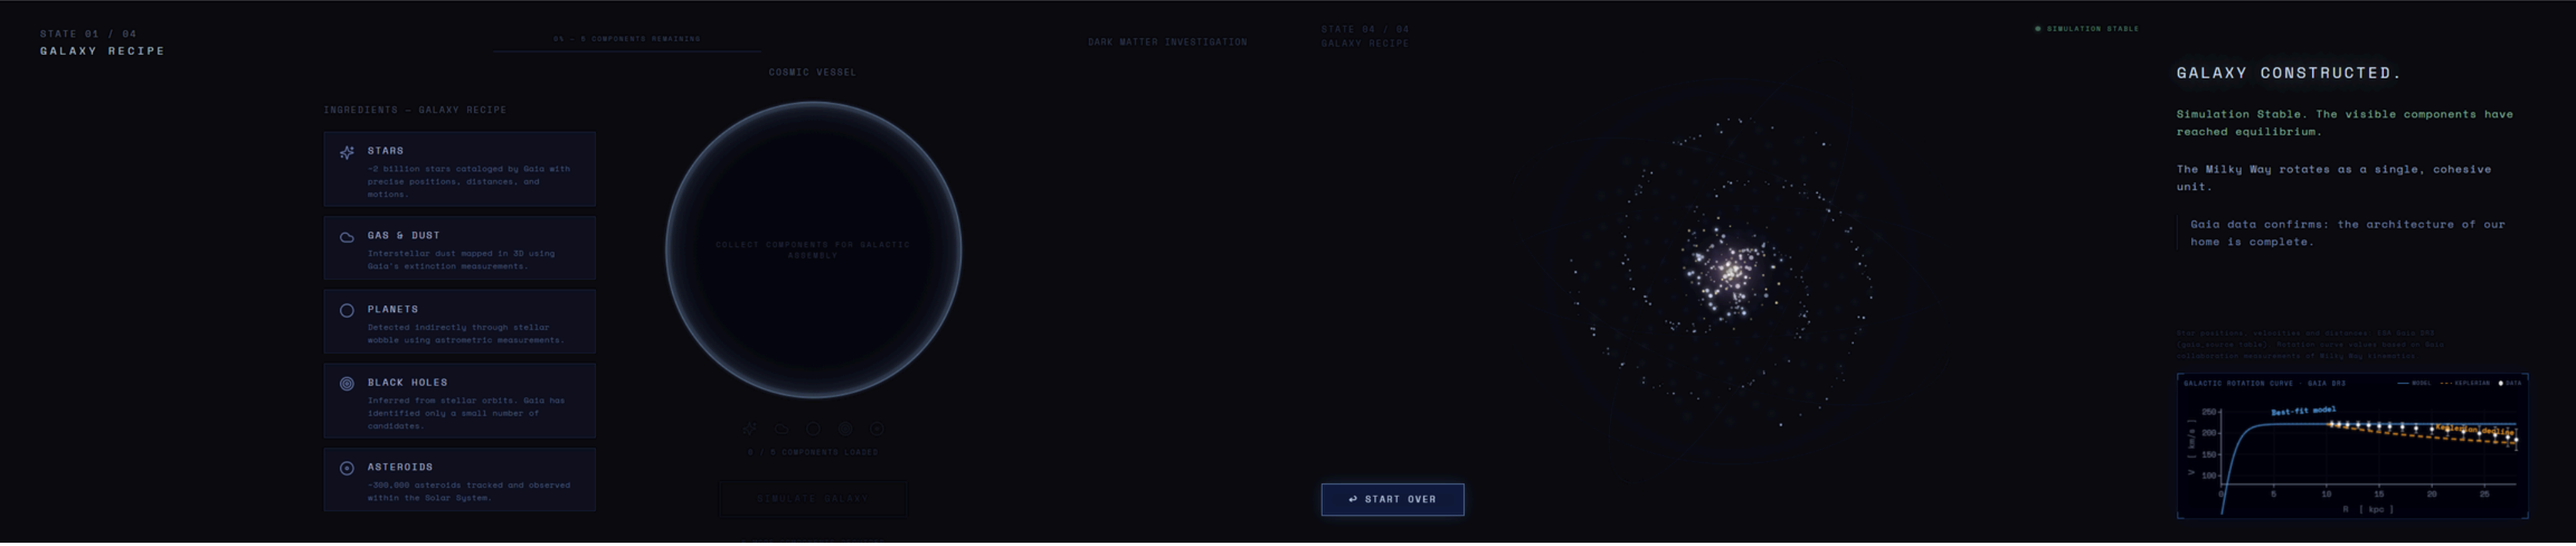




GALAXY CONSTRUCTOR

Interactive Data Visualization System and Motion Design

I designed and co-created an interactive educational app that translates complex astrophysical data into an engaging visual experience. Users don't just view the graphics, they "build" them step by step, allowing for an intuitive understanding of challenging concepts (such as dark matter).



Key competencies used in the project:

- **Vector Illustration and UI:** I designed a proprietary high-tech observatory interface based on precise vector graphics and modern typography (Neuropol X, Questrial).
- **Motion Design and Animation:** I created an advanced particle animation system (Canvas Particle System), in which each element (stars, planets) moves according to the mathematical logic of galaxy rotation.
- **Data Visualization (Infographics in Motion):** The heart of the project is an interactive "mass counter" (odometer), which updates data in real time with three-decimal precision, responding to user input.
- **Use of AI Tools:** I used generative tools (Figma Make) during asset creation and code optimization, allowing for rapid prototyping and testing of various visual variants.

AMELIE

Interactive Movie

Watch Trailer

IDEA

Interactive Drama: A film with branching narratives exploring the tension between societal ambition and emotional empathy.

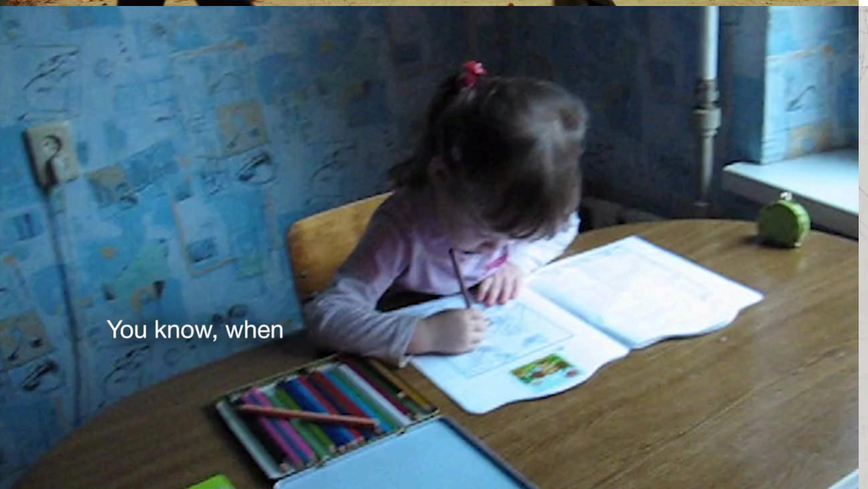
Thematic Focus: A dialogue-driven story highlighting how minor verbal choices and tone of voice shape personal relationships.

EXECUTION

Solo Project: Total creative control from scriptwriting to final VFX assembly.

Roles: Director, Cinematographer, Narrative Designer, and Editor.

Canon eos 250d, Premiere Pro, After Effects, 2026



AMELIE

Interactive story

A **movie** with **choices and multiple endings**, exploring the tension between ambition and the search for meaning in life. The project focuses on the inner monologue of a protagonist tired of the pressure to constantly “keep up” and compare herself to others. The **work emphasizes the importance of words,** tone, and seemingly minor decisions, **showing how strongly they can affect another person's emotional state.** Through contrasting endings, the story shifts the emphasis from achievements and expectations to presence, empathy, and quiet moments together, drawing attention to the responsibility that words carry in moments of fragility.

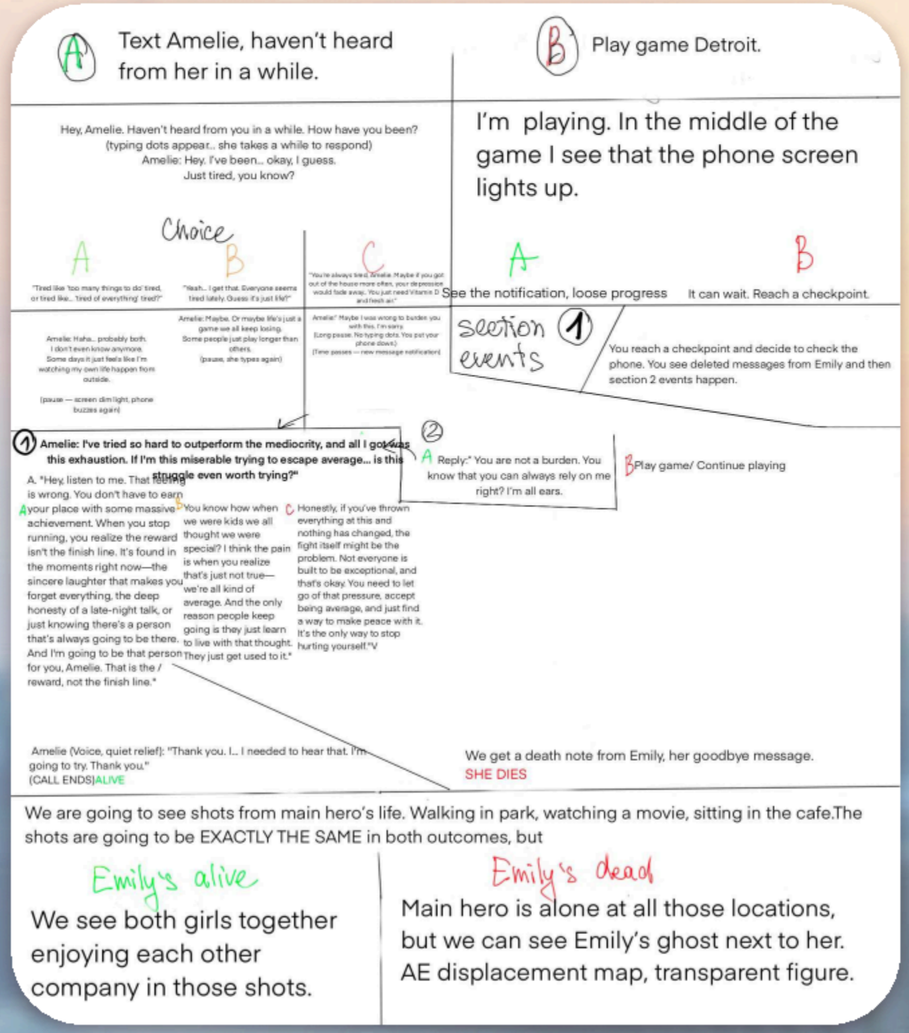
STORYBOARD

CLICK TO SEE

HAPPY ENDING

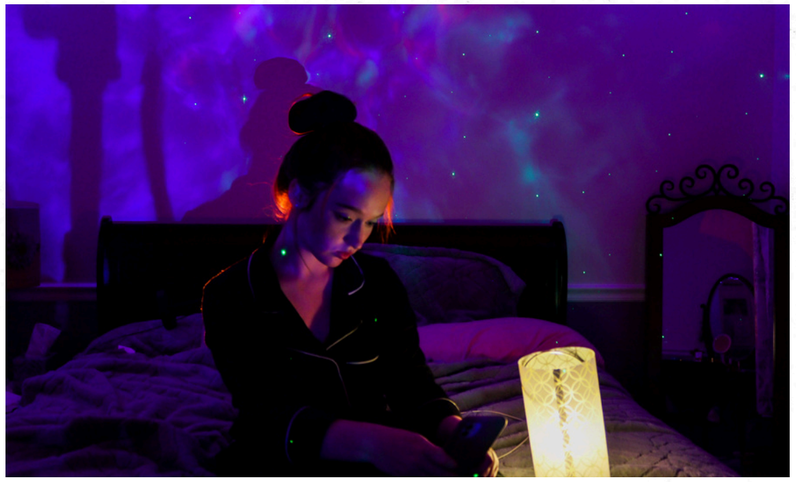
TRAGIC ENDING

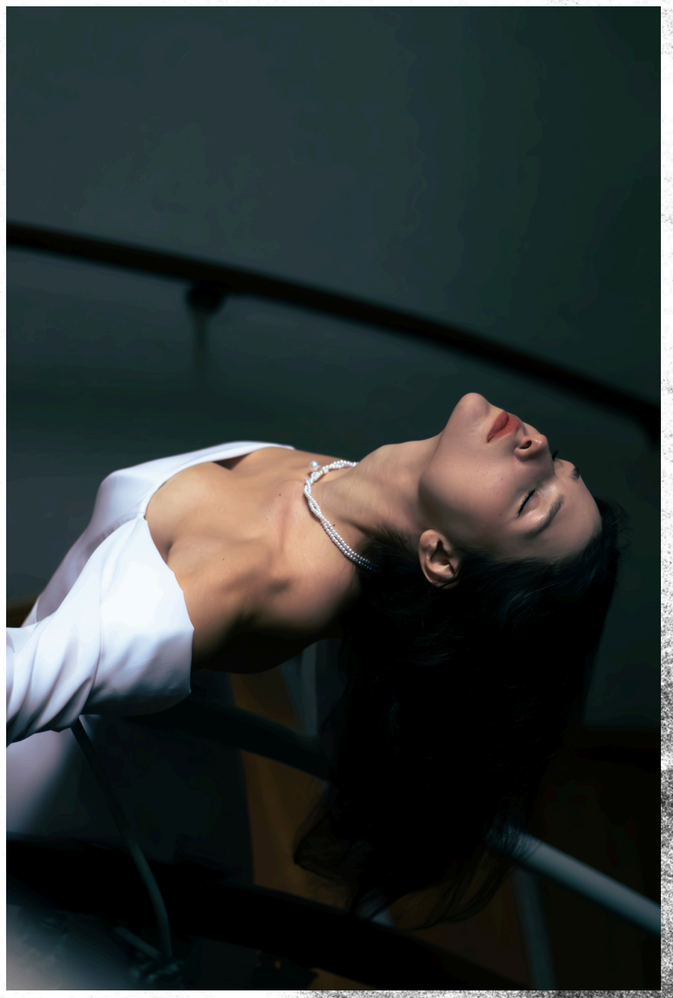
"Amelie" took significant time for planning. I had to think in advance about where each branch of the story will lead, ***sketch each shot and think of their perspective, type of lightning, locations to film.***

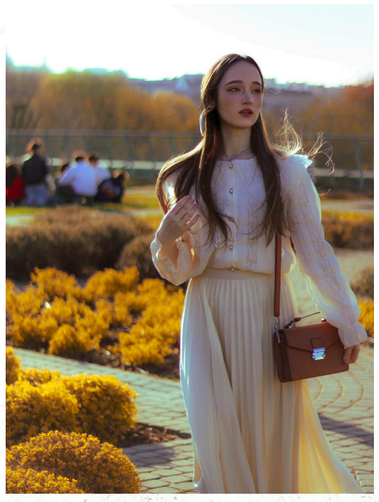


PHOTOGRAPHY

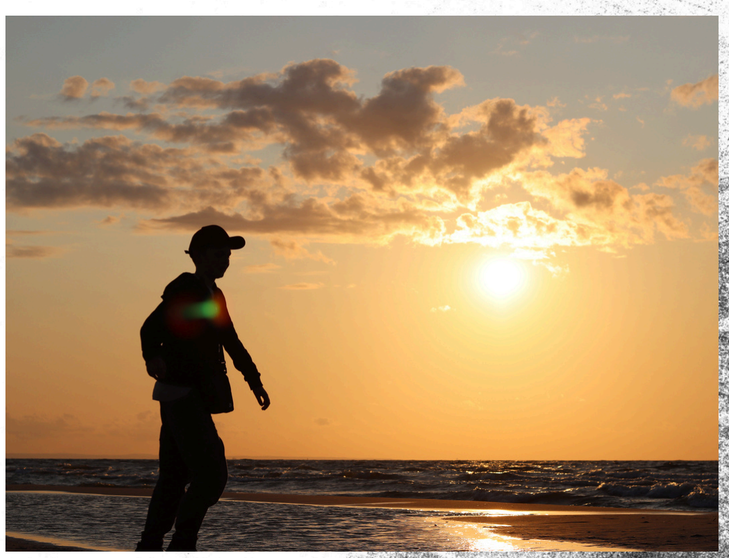
I love exploring how framing, light, and color grading define the mood of an image.







Photography helps me master color theory and understand how each decision influences the emotions an image evokes. In my nature photography, I focus on atmosphere and silence — using light and color to turn stillness into emotion and evoke tranquility, reminscence, or yearning.



AI GENERATED STORIES

SWIPE THROUGH TIME

Video Art / Creative Editing

The video explores the **intersection of ancient history and modern reality**, transforming an everyday interior into a **portal to Ancient Egypt**. This project combines dynamic lighting, color grading, particle simulation, 3D object integration, and motion graphics animation to create a seamless and cinematic **transformation between worlds**.

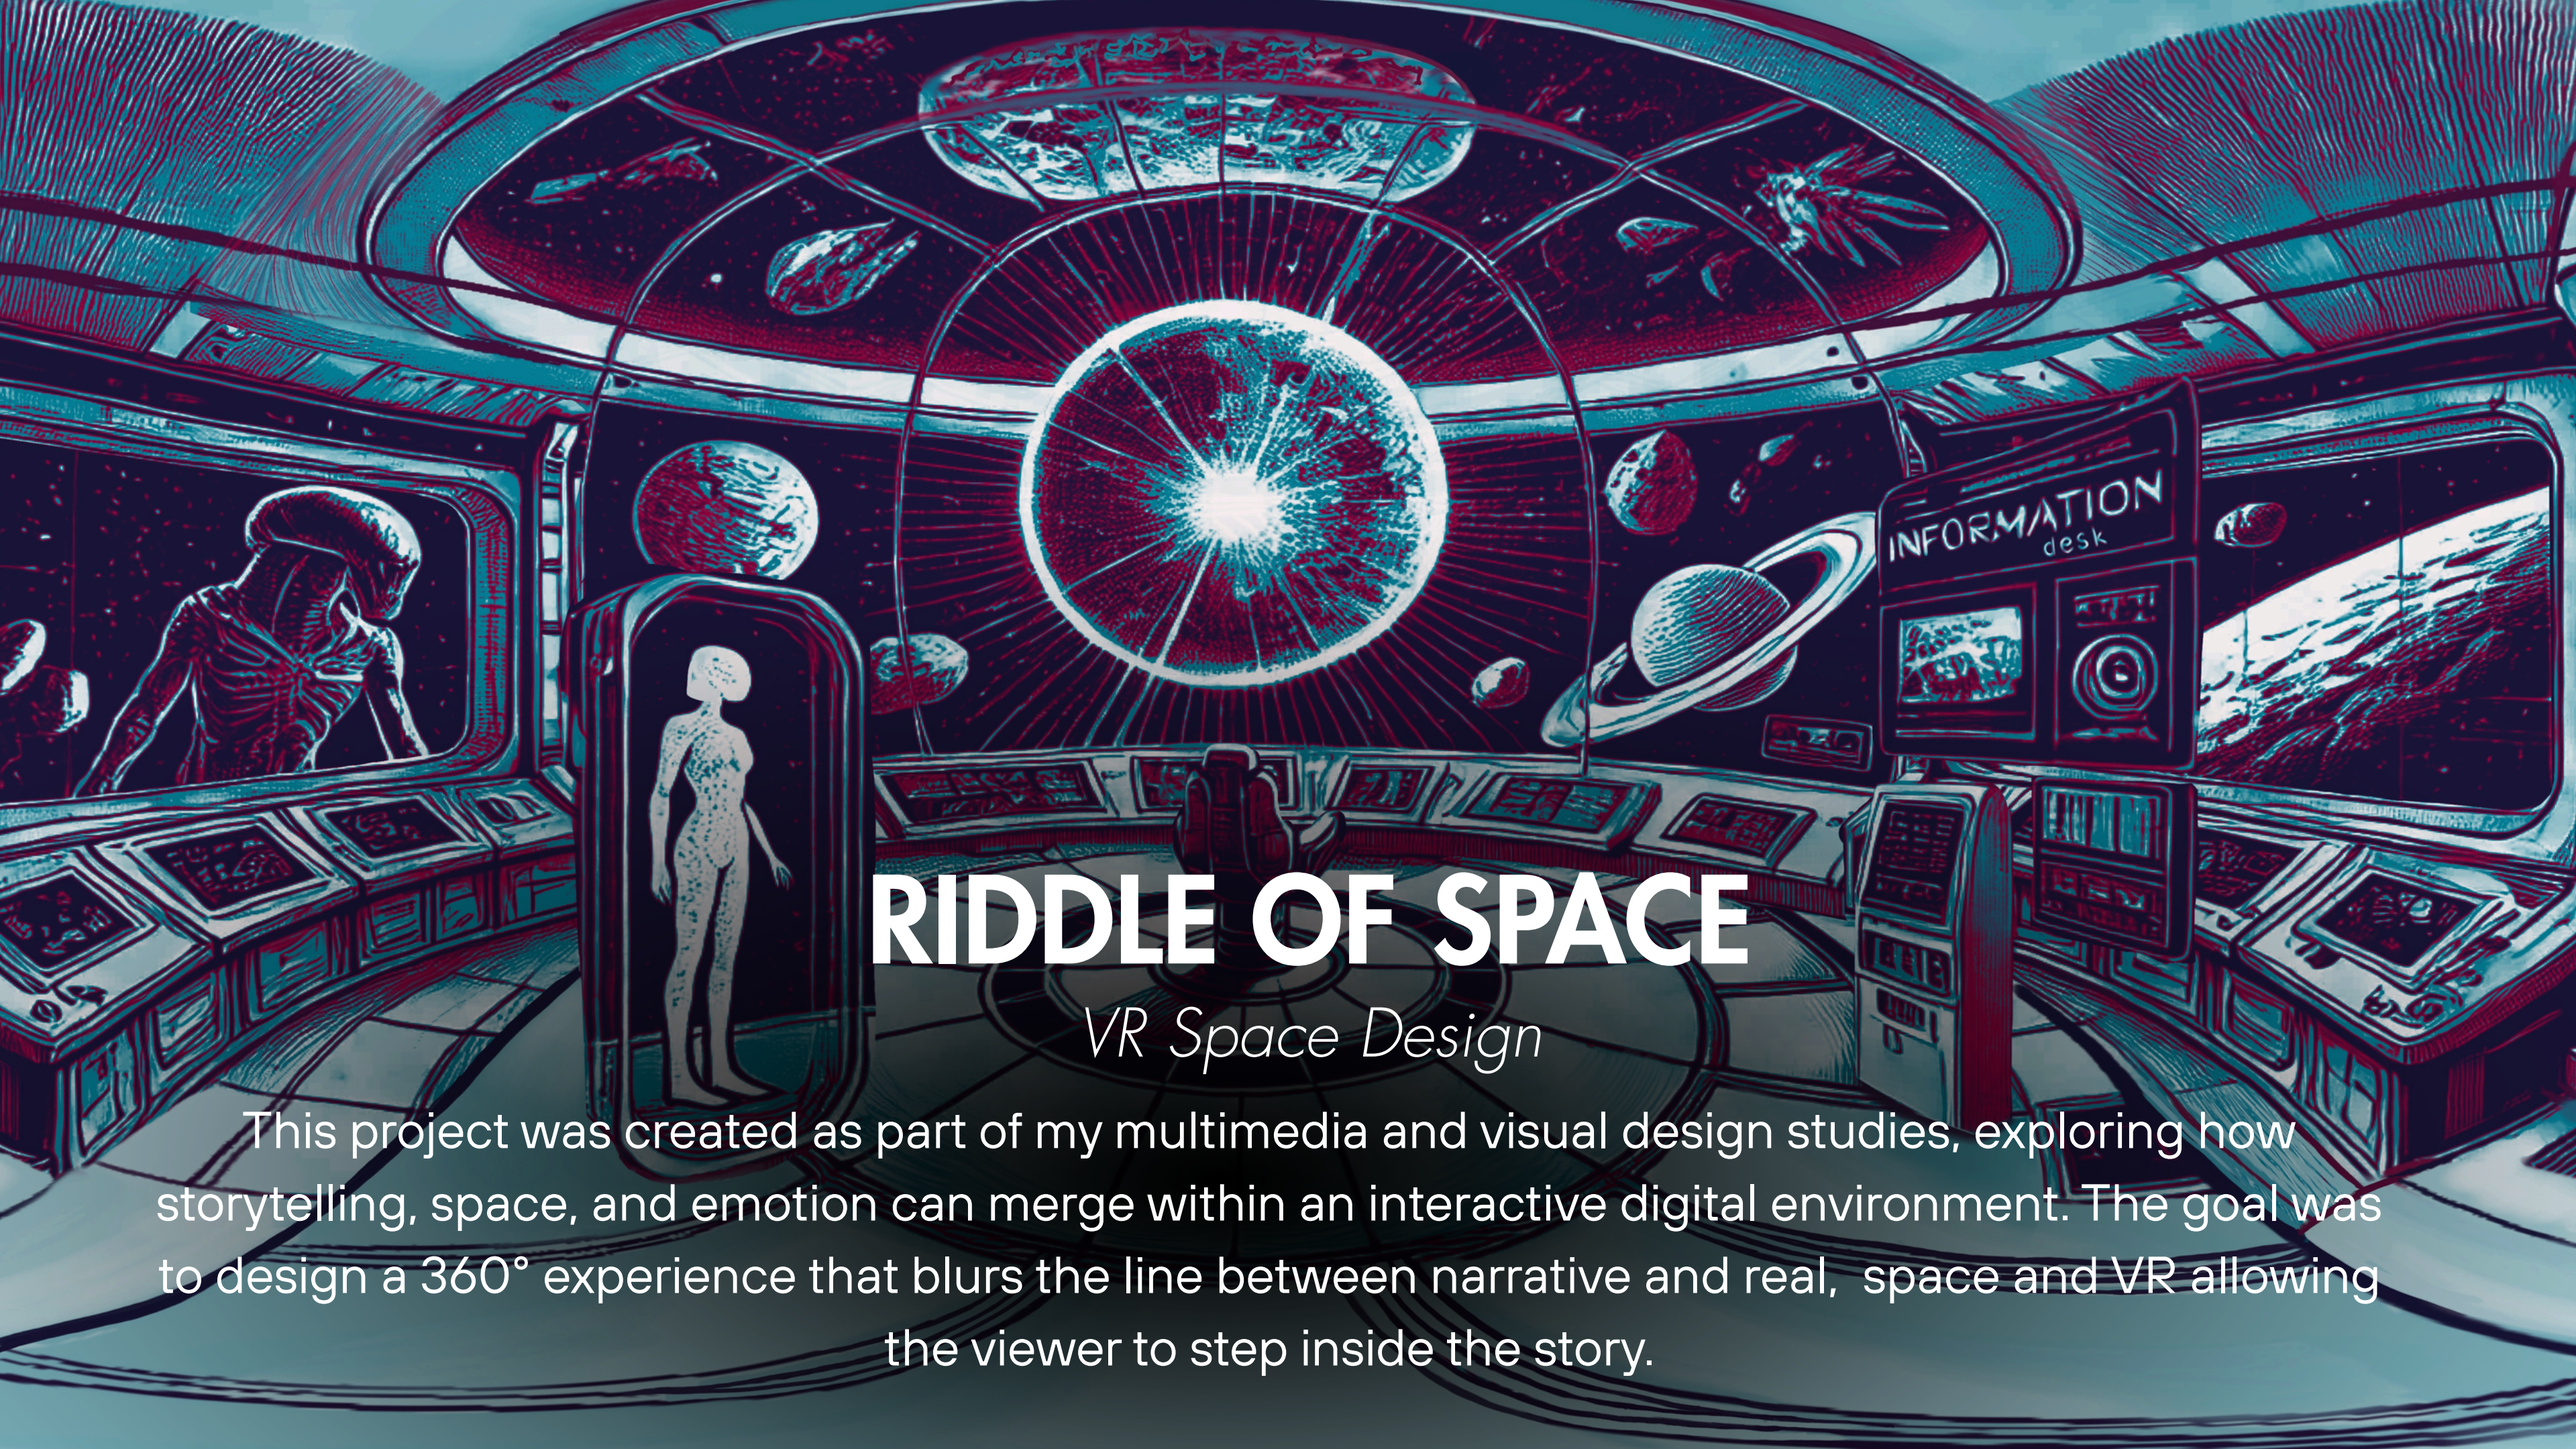
3D MODELING & CONCEPTUAL ENVIRONMENTS

DISTANT MEMORY

A surreal 3D environment recreating a childhood memory as seen in a dream. A reflection on nostalgia and imagination.

CLUMSY “M”

The goal was to give a letter a character and show relevant behaviour. Through this work I explored animation in Maya and basic 12 principles of animation.



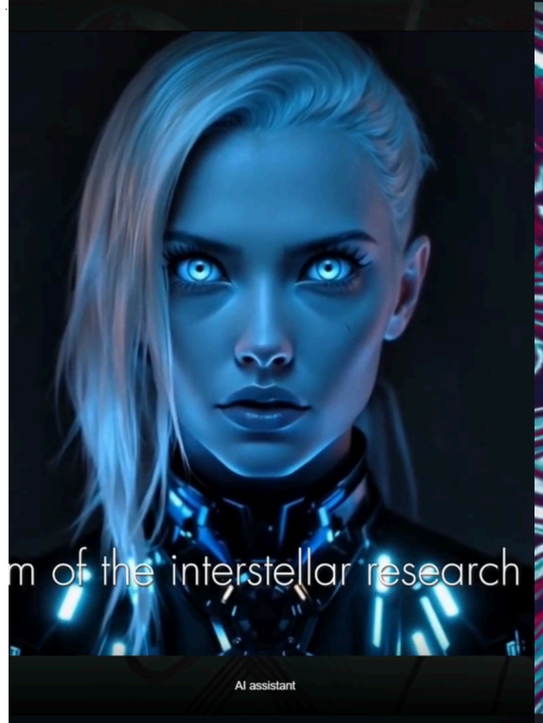
RIDDLE OF SPACE

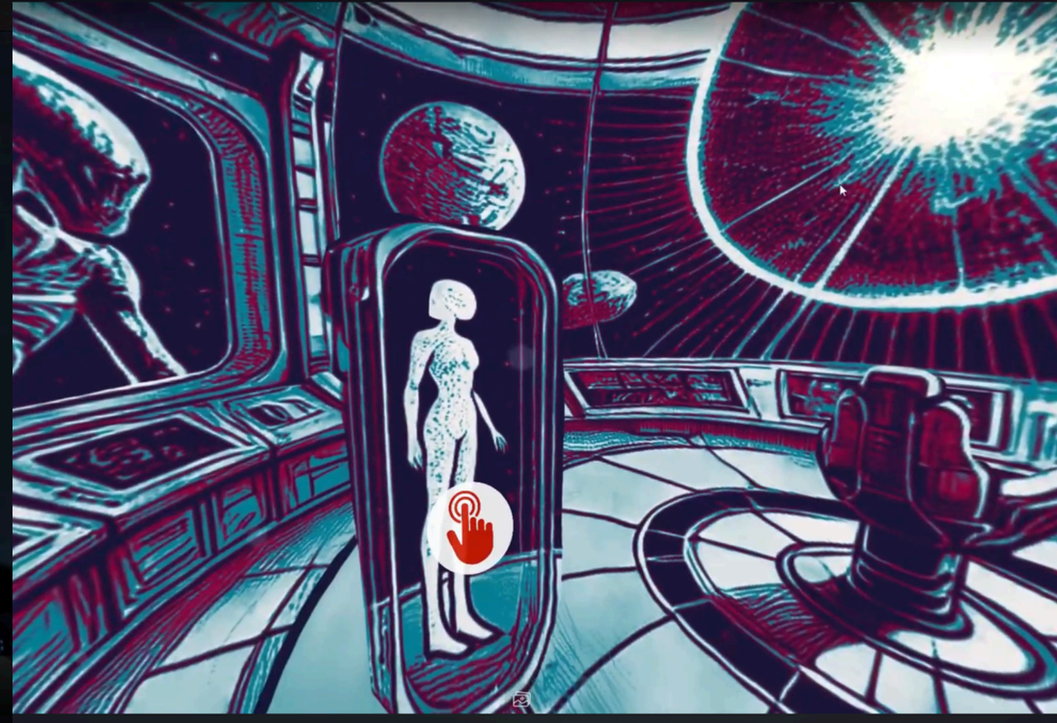
VR Space Design

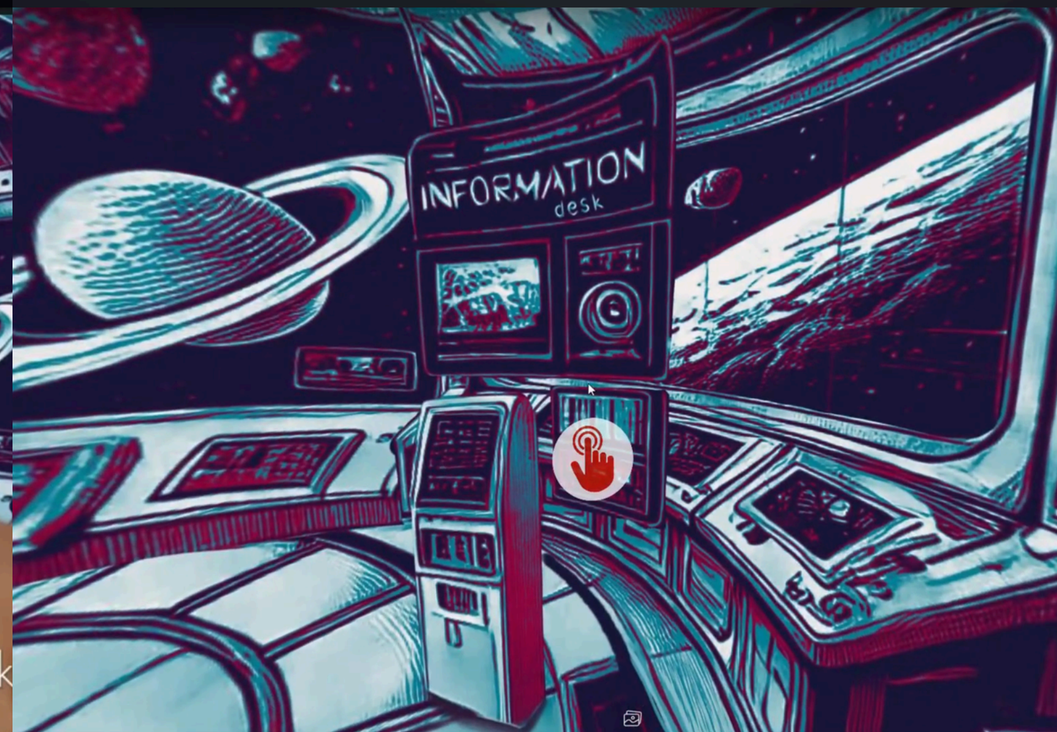
This project was created as part of my multimedia and visual design studies, exploring how storytelling, space, and emotion can merge within an interactive digital environment. The goal was to design a 360° experience that blurs the line between narrative and real, space and VR allowing the viewer to step inside the story.

CONCEPT

The experience takes place aboard a **futuristic intergalactic airship** that once carried a large crew on a long mission across deep space. The user wakes up in the the main control room, guided only by an **AI hologram** - the ship's assistant. Through interactive elements, the viewer discovers fragments of what happened: **a goodbye message from a terrified crew member** reveals that something unknown attacked the ship.



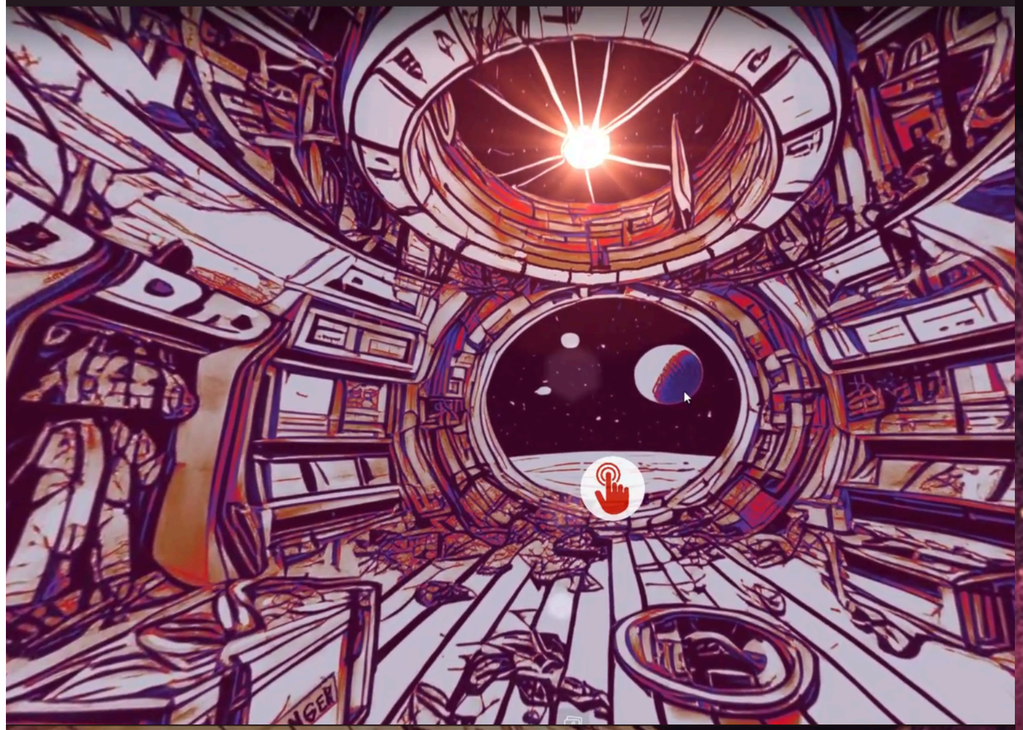


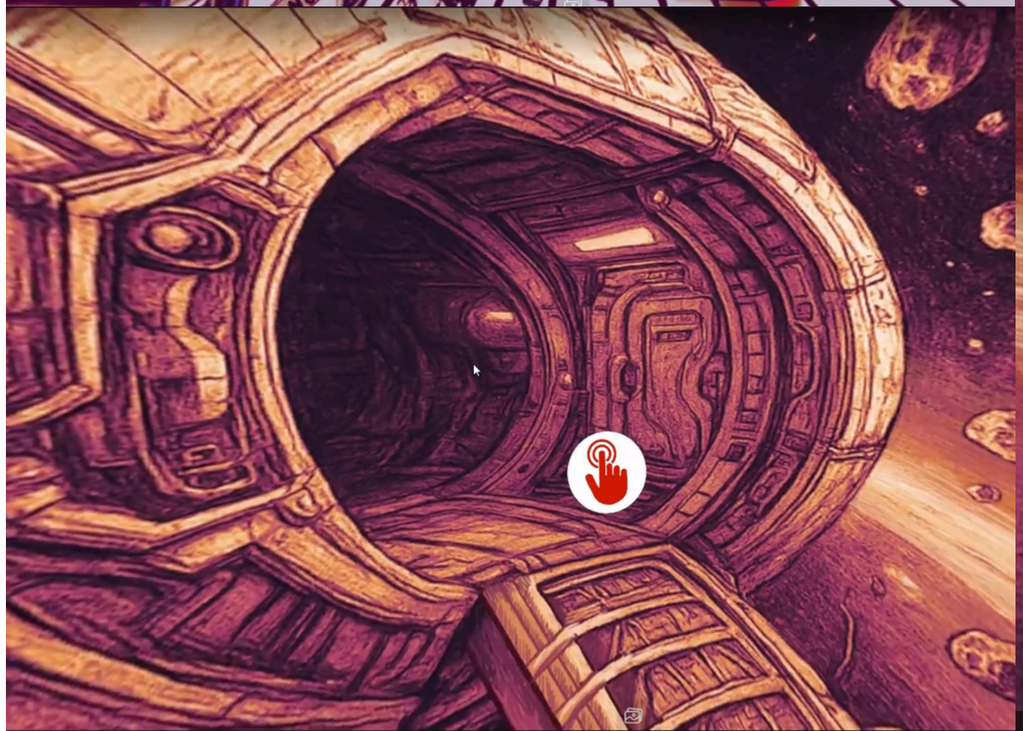


CONCEPT

From the **headquarters**, the viewer can move through the airlock and reach **the outer bay**, where torn apart suits on the floor and the open door to space tell story of the **crew's disappearance**. The final panorama reveals the ship from the outside, surrounded by planets, comets, asteroids, and the **alien creature** right next to the airship.

Each scene is fully **explorable in 360°**, accompanied by **immersive dark echo music**. As users move through the airship, they solve the riddle of space at their own pace, guided by atmosphere, sound, and visual cues.





PROCESS

All environments were designed as **equirectangular panoramas** to simulate realistic 3D immersion. The visuals were created in high detail using black-and-white ink-inspired style and then colored by color map emphasizing **fear, mystery, and chaos.**

The AI hologram and crew member video were **AI generated avatars** and added as **interactive hotspots**, designed to provide a player with a background of the story. The entire navigation system was structured to let viewers **move freely between scenes** - entering and exiting through doors that connect each location organically.
